

Install Jabber

on a Personal Computer (Windows 10)

Quick Reference Guide

Preamble

Jabber is communication/collaboration tool featuring telephone, interactive messaging (chat), and presence functionality. You will need to take some steps to install it on your personal computer before you can start using it. This Quick Reference Guide will show you how to do that.

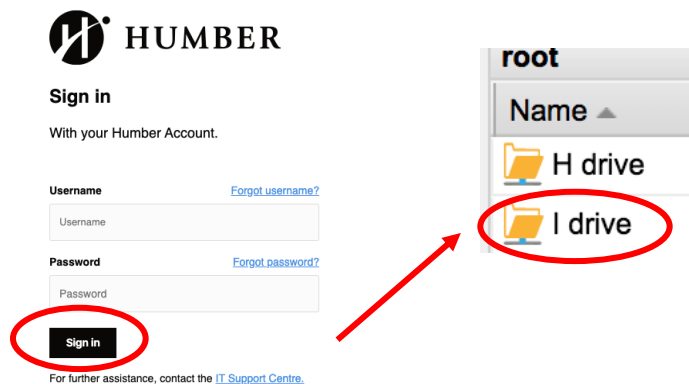

Installation

You will need to connect to Humber to get the installation files for Jabber.

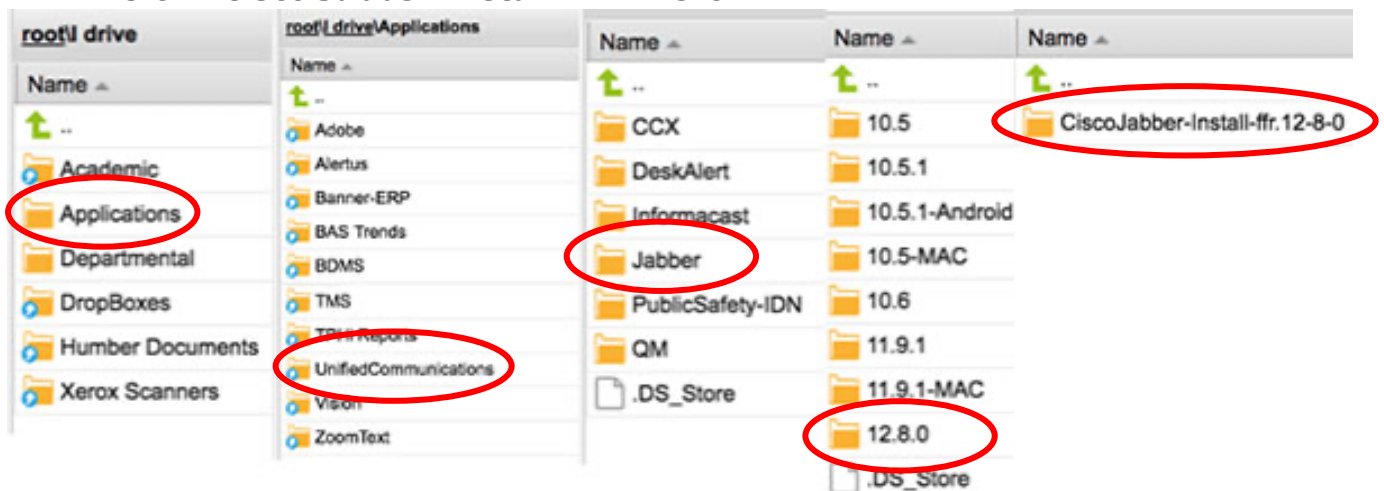

1. Open your web browser (Google Chrome preferred) and navigate to the website: <https://myfiles.humber.ca>

2. Enter your Humber credentials and **Sign in**. Select the I-Drive folder by clicking on it.

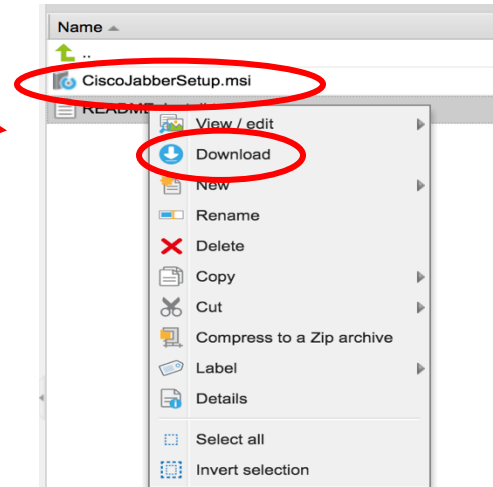

3. In the I-Drive folder, select **Applications** → **UnifiedCommunications** → **Jabber** → **12.8.0** → **Cisco.Jabber-Install-ffr.12-8-0**

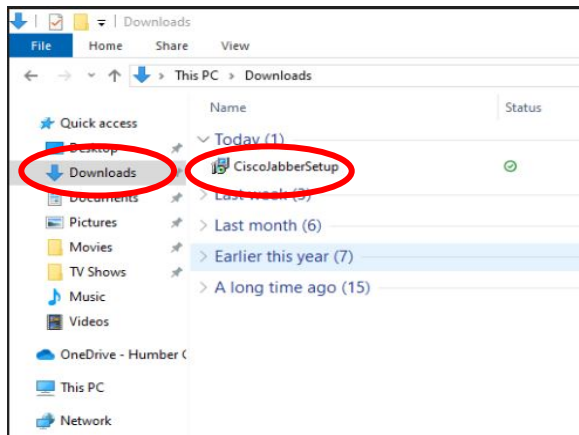

Installation ...continued

4. Double-click the **CiscoJabberSetup.msi** file and select **Download**.

5. Open your **File Explorer** and double-click on your **Downloads** folder. Launch the CiscoJabberSetup file by double-clicking on it.

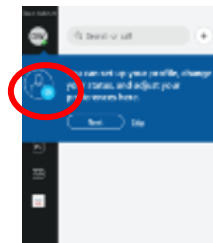

6. Click on the **Accept and Install** button and then click on **Finish** when the installation is complete. Jabber will launch.

NOTE: If Jabber does not start automatically, you can launch it from the desktop shortcut.

Getting Started

1. Enter your username@humber.ca and press **Next**.
2. Your username should auto-populate in the username field. Enter your password and click **Next**.
3. You should now be logged in. Click on the 'person icon' to set up your profile, change your status and adjust your preferences.

For help with Jabber features, refer to the [Jabber Quick Reference Guide](#) on the its.humber.ca website.
